The Power Tips! Series

#1, July 2008: "Picking the right operating frequency for your power supply",
http://www.powermanagementdesignline.com/howto/powersupplies/208802819
#2, August 2008: "Taming a noisy power supply",
http://www.powermanagementdesignline.com/howto/powersupplies/209902227
#3, September 2008: "Damping the input filter--Part 1",
http://www.powermanagementdesignline.com/howto/powersupplies/210500098
#4, October 2008: "Damping the input filter--Part 2",
http://www.powermanagementdesignline.com/howto/powersupplies/210604698
#5, November 2008: "Buck-boost design uses a buck controller",
http://www.powermanagementdesignline.com/howto/powersupplies/212000569
#6, December 2008: "Accurately Measuring Power Supply Ripple",
http://www.powermanagementdesignline.com/howto/powersupplies/212201535
#7, January 2009: "Efficiently driving LEDs offline",
http://www.powermanagementdesignline.com/howto/powersupplies/212701082
#8, January 2009: "Reduce EMI by varying power supply frequency",
http://www.powermanagementdesignline.com/howto/213001205
#9, March 2009: "Estimating Surface Mounted Semiconductor Temperature Rise",
http://www.powermanagementdesignline.com/howto/215900531
#10, April 2009: "Simply Estimate Load Transient Response",
http://www.powermanagementdesignline.com/howto/216500143
#11, May 2009: "Resolve Power Supply Circuit Losses",
http://www.powermanagementdesignline.com/howto/217300383
#12, July 2009: "Maximize Power Supply Efficiency",
http://www.powermanagementdesignline.com/howto/218400578
#13, July 2009: "Don't get burned by inductor core losses",
http://www.powermanagementdesignline.com/howto/218500155
#14, July 2009: "SEPIC converter makes an efficient bias supply",
http://www.powermanagementdesignline.com/howto/218900164
#15, September 2009: "Design a low-cost, high-performance LED driver",
#16, September 2009: "Snubbing the forward converter",
http://www.powermanagementdesignline.com/howto/220601014
#17, November 2009: "Snubbing the flyback Converter",
http://www.powermanagementdesignline.com/howto/221600356
#18, December 2009: "Your regulator’s output-voltage accuracy may not be as bad as you think",
http://www.powermanagementdesignline.com/howto/222000672
#19, January 2010: "Easily create multiple negative output voltages",
http://www.powermanagementdesignline.com/howto/222300160
#20, February 2010: "Watch those unintended resonant responses",
http://www.powermanagementdesignline.com/howto/222601016
#21, March 2010: "Watch That Capacitor RMS Ripple Current Rating!",
http://www.powermanagementdesignline.com/howto/223100643
#22, April 2010: "Avoid These Common Error Amp Pitfalls",
http://www.powermanagementdesignline.com/howto/224201223
#23, May 2010: "Improve a power-supply's load-transient response--Part 1",
http://www.powermanagementdesignline.com/howto/224701069
#24, June 2010: "Convert parallel impedances to series impedances",
http://www.powermanagementdesignline.com/howto/225700619
#25, July 2010: "Improve a power supply's load transient response--Part 2",
http://new.eetimes.com/design/power-management-design/4201187/Power-Tip-25--Improve-a-power-supply-s-load-transient-response-Part-2-
#26, August 2010: "Current distribution in high-frequency conductors",
http://www.eetimes.com/design/power-management-design/4205892/Power-Tip-26--Current-distribution-in-high-frequency-conductors
#27, September 2010: "Paralleling power supplies using the droop method",
http://www.eetimes.com/design/power-management-design/4207264/Paralleling-power-supplies-using-the-droop-method
#30, December 2010: "Power Tip 30: Low-voltage buck IC makes simple, inexpensive bias supply,"
http://www.eetimes.com/design/power-management-design/4211248/Power-Tip-30--Low-voltage-buck-IC-makes-simple--inexpensive-bias-supply-
#31, January 2011: "Pick the right resistance ratio of synchronous buck MOSFETs"
http://www.eetimes.com/design/power-management-design/4212607/Power-Tip-31--Pick-the-right-resistance-ratio-of-synchronous-buck-MOSFETs-
#32, February 2011: "Beware of circulating currents in a SEPIC coupled-inductor--Part 1"
#33, March 2011: "Beware of circulating currents in a SEPIC coupled-inductor--Part 2"
#34, April 2011: "Design a simple, isolated bias supply"
http://www.eetimes.com/design/power-management-design/4214687/Power-Tip-34--Design-a-simple--isolated-bias-supply?-Ecosystem=power-management-design
#35, May 2011: "Minimize transformer interwinding capacitance effects"
http://www.eetimes.com/design/power-management-design/4215828/Power-Tip-35--Minimize-transformer-interwinding-capacitance-effects?-Ecosystem=power-management-design
#36, June 2011: "Higher-voltage LEDs improve light bulb efficiency"
#37, July 2011: "Trade line range for input-capacitor ripple current"
http://www.eetimes.com/design/power-management-design/4217792/Power-Tip-37--Trade-AC-line-range-for-input-capacitor-ripple-current-
#38, August 2011: "Simple latch circuit protects power supplies"
http://www.eetimes.com/design/power-management-design/4218752/Power-Tip-38--Simple-latch-circuit-protects-power-supplies-
#39, September 2011: "You get more than just better efficiency by going synchronous"
http://www.eetimes.com/design/power-management-design/4227394/Power-Tip-39--You-get-more-than-just-better-efficiency-by-going-synchronous-
#40, October 2011: "Common-mode currents and EMI in non-isolated power supplies"
http://www.eetimes.com/design/power-management-design/4229769/Power-Tip-40--Common-mode-currents-and-EMI-in-non-isolated-power-supplies-
#41, November 2011: "Powering DDR memory"
http://www.eetimes.com/design/power-management-design/4230562/Power-Tip-41--Powering-DDR-memory-
#42 (Part 1): "Discrete devices—a good alternative to integrated MOSFET drivers"
http://www.eetimes.com/design/power-management-design/4231249/Power-Tip-42--Part-1--Discrete-devices-a-good-alternative-to-integrated-MOSFET-drivers-
#43: "Discrete devices—a good alternative to integrated MOSFET drivers (Part 2)"
http://www.eetimes.com/design/power-management-design/4234630/Power-Tip-43--Discrete-devices-a-good-alternative-to-integrated-MOSFET-drivers--Part-2-
#44: "Handling high dl/dt load transients, Part 1"
http://www.eetimes.com/design/power-management-design/4236503/Power-Tip-44--Handling-high-dl-dt-load-transients--Part-1-
#45: "Handling high dl/dt load transients, Part 2"
http://www.eetimes.com/design/power-management-design/4238184/Power-Tip-45--Handling-high-dl-dt-load-transients--Part-2?
#46: "Time your synchronous-buck FETs properly"
http://www.eetimes.com/design/power-management-design/4370957/Power-Tip-46--Time-your-synchronous-buck-FETs-properly
#47: "Tame conducted common-mode emissions in isolated switchers (Part 1)"
(http://www.eetimes.com/ContentEETimes/Documents/Schweber/PowerTipSerieslist.pdf)
