Figure 24 Adding postregulation to the circuit of Figure 22 reduces the output ripple from 2V to 2mV. An LT3468-based dc/dc converter, similar to the one in Figure 22, delivers high voltage to the collector of Q₁. Amplifier A₂ and Q₁ and Q₂ form a tracking, high-voltage linear regulator. The zener diode sets Q₁'s collector-to-emitter voltage to 15V, ensuring tracking with minimal power dissipation. Transistors Q₃ and Q₄ limit the short-circuit output current.
